| **Project title** | Implement Client Script & UI Policy (Incident) |

In the demonstration phase, I prepared a walkthrough to explain the functionality of my ServiceNow Incident project. I demonstrated how the system responds when Impact is set to High and how Urgency is automatically set to High. I showed the read-only behavior of the Urgency field and demonstrated the validation rule by leaving Assigned To empty and attempting to submit the Incident. I then explained the successful submission condition when Assigned To was filled in. I demonstrated how changing Impact from High to Medium reverses the UI Policy behavior. I also showed how the onCellEdit Client Script prevents direct changes to State from the Incident list. Finally, I demonstrated the form-based State update procedure. Through this demonstration, I explained how UI Policies and Client Scripts work together to automate field behavior, validate information, and improve the accuracy of Incident records.
