Team Member	P.Vairamuthu
Project title	Implement Client Script & UI Policy (Incident)

In the testing phase, I prepared test cases to verify the functionality of the UI Policy and Client Scripts. I checked the mandatory-field validation by setting Impact to High, leaving Assigned To empty, and attempting to submit the Incident. I verified that the expected behavior was to display an error message and prevent submission. I also checked the successful submission condition by filling in Assigned To. I tested the onChange Client Script to verify that Urgency was automatically set to High when Impact was changed to High. I checked that Urgency became read-only and that the policy behavior was reversed when Impact was changed to Medium. I also tested the onCellEdit Client Script by attempting to change State directly from the Incident list. The expected result was an alert and rejection of the list edit. Finally, I checked the form-based State update procedure. These tests helped me evaluate the main validation rules and field behaviors configured in the project.
